Global IUCN Red List Category —

Criteria —

Phylloscopus sibilatrix is a widespread summer visitor to much of Europe, which constitutes >75% of its global breeding range. Its European breeding population is extremely large (>14,000,000 pairs), and was stable between 1970–1990. Although most populations in eastern Europe remained stable during 1990–2000 (the trend of the key population in Russia was unknown), the species declined in the north and west, and underwent a moderate decline (>10%) overall. Consequently, this previously Secure species is now provisionally evaluated as Declining.
