Sterna sandvicensis SANDWICH TERN

SPEC 2 (1994: 2) Status Depleted Criteria Moderate historical decline European IUCN Red List Category — Criteria — Global IUCN Red List Category — Criteria —

Sterna sandvicensis is a widespread but very dispersed breeder in coastal areas of Europe, which holds >50% of its global population. Its European breeding population is relatively small (<130,000 pairs), and underwent a moderate decline between 1970–1990. Although there were declines in a few countries during 1990–2000, key populations in the Netherlands, Ukraine and Russia fluctuated, and the species declined only slightly overall. Nevertheless, its population still remains below the level that preceded its decline, and consequently it is evaluated as Depleted.
